TEST PROCEDURE

FOR

STR-2B and STR-2C

TM	C SPECIFICATI	ON	NO. s-874
REV: OABC			
COMPILED: RDV	CHECKED:	APPD:	SHEET 2 OF 10
TITLE: TEST PROCEDURE	FOR STR-2B,& 2C		
Typed by mtp 11/17/6	4		

A. EQUIPMENT REQUIRED

- 1. VOM Simpson Model 260 or equivalent.
- 2. Audio Signal Generator HP200, or equivalent.
- 3. 4 ohm Loudspeaker.
- 4. HP 410 VTVM, or equivalent.
- 5. HP 606A RF Signal Generator, or equivalent.
- 6. TEKTRONIX Scope, Type 581 or equivalent.
- 7. One pair of ear phones (600 ohms).
- 8. Ballantine Model 314 A-C VTVM, or equivalent.
- 9. Schematic CK817.
- 10. Step Attenuator, 50 ohms, TELONIC Model TG 950, or equivalent.
- 11. 600 ohms resistor 1 watt; 47 ohm resistor 1/2 watt.
- 12. Frequency Counter HP 524C, or equivalent.
- 13. BNC "T" adapter UG-274A/U.
- 14. Test Procedure S-808.
- 15. AX-436 Extension Module.

B. WARNING

This unit is a Solid State Device. Any indiscriminate resistance measurement may harm this unit. Make resistance measurement only where and when so indicated.

C. PRELIMINARY

1. All RF modules should be pre-tested per TMC S-808 <u>before</u> being installed into this unit. Install the customer specified RF module into this unit.

TMC FORM SPEC 1

1M - 8-64-AINS

no. s-874 REV: COMPILED: CHECKED: 10 RDV APPD: SHEET 3 TITLE:

TEST PROCEDURE FOR STR-2B & 2C

Typed by mtp 11/17/64

C. PRELIMINARY - Cont'd

- 2. Inspect the unit for mechanical imperfections such as loose screws, imperfect printed circuit boards, cold solder joints etc.
- 3. With the ohmmeter d-c setting in the + position, measure 130 ohms +10% from Pin #11 on the AF board to GND. With the ohmmeter d-c setting in the minus (-) position, measure 200 ohms +10% from Pin #14 on the AF board to GND.

POWER

- 1. Connect the unit to an a-c outlet.
- 2. Connect a 600 ohm 1 watt resistor between terminals 3 & 5 on TB1501, and a 4 ohm loudspeaker between terminals 9 & 10 on TB1501.
 - 3. Set the power switch to ON. The white light should go on.
- 4. With the HP VTVM measure +12V +5% from Pin #11 on the audio board to GND. from Pin #7 on the IF board to GND, and from Pin #1 on the RF board to GND. Also measure -12V +5% from Pin #14 on the audio board to GND, from Pins #8 & 14 on the IF board to GND, and from Pin #8 on the RF board to GND.
- 5. Connect the a-c Ballantine between Pin #11 on the AF board to GND. a-c noise measured should not exceed 1 mv.
 - 6. Repeat Step #5 for Pin #14 on the audio board.
- 7. Make sure that the removal of the a-c line fuse makes the respective voltages disappear.
 - 8. Measure 115V a-c with the Simpson between Pins #10 & 9 on the RF board.

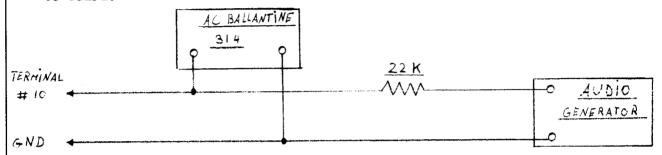

RECEIVER AUDIO CHECK

- 1. Set the SQUELCH control on the rear apron to maximum clockwise.
- 2. Set the VOLUME control on the front panel maximum clockwise.
- Set R1822 maximum clockwise.

TN	NO. s=874							
REV: OABC								
COMPILED: RDV	CHECKED:	APPD:	SHEET 4 OF 10					
TITLE: TEST PROCEDURE FOR STR-2B & 2C								
Typed by mtp 11/	17/6և							

E. RECEIVER AUDIO CHECK - cont'd

4. Set the AUDIO SIGNAL GENERATOR at 1 KC and connect to the RECEIVER IF board as shown below with the generator output at zero, and A-C VTVM across input to board.

- 5. Increase the AUDIO GENERATOR output until a 1 KC tone is heard through the speaker. Inserrt the phones into J1516. The 1 KC tone should disappear from the speaker and should be heard on the phones. Remove phones.
- 6. Rotate the SQUELCH control maximum counter-clockwise. The tone should abrubtly disappear.
- 7. Set the AUDIO GENERATOR output for a 10 mv reading on the Ballantine A=C VTVM. Remove meter.
- 8. Connect the Ballantine across terminals 3 & 5 on TB1501. The meter should read approximately 780 mv.
- 9. Connect the Ballantine across terminals 3 & 4 on TB1501. The meter should read exactly half the voltage obtained in Step 8. Remove meter.
- 10. Connect the Ballantine across R1660 on the RCVR AF printed circuit board. The meter should read approximately 1.4 volts. Leave meter connected.
- 11. Rotate the VOLUME control counter-clockwise. The voltage across R1660 should drop proportionately with rotation of the VOLUME control knob. Reset the VOLUME control maximum clockwise, and remove the Ballantine A-C VTVM.

TM	No. s-874

COMPILED: RDV	CHECKED:	APPD:	SHEET 5 OF 10				
TITLE: TEST PROCEDURE	E FOR STR-28 & 2C						
Typed by mtp 11/1	7/64						

F. RECEIVER IF ALIGNMENT

- 1. Set the RCVR sideband switch to LSB and turn R1554 & R1555 fully clockwise.
- 2. Connect the counter to emitter lead of Q1802 and adjust C1832 for a frequency of 1.5 +2 cps as registered on the counter. Leave counter connected.
 - 3. Set the RCVR sideband switch to USB/REMOTE.
- 4 . Adjust C183 4 for a frequency of 2.0 mc $^{+2}$ cps as registered on the counter. Remove the counter.
- 5. Connect the HP VTVM between terminal 9 on the RCVR IF printed circuit board and GND. The meter should read approximately +1.8 volts d-c. Remove meter.
 - 6. Set the RCVR sideband switch to LSB and remove the 1.5 mc crystal Y1801.
 - 7. Connect the Ballantine between the base of Q1802 and GND.
- 8. Connect the HP 606A RF GENERATOR between terminals 1 & 2 on the RCVR IF board with the generator's output control at zero.
- 9. Set the generator frequency at 1.75 mc +50 cps using the frequency counter, and increase the generator output to approximately 1.0 mv. The Ballantine should indicate some voltage present at the base of Q1802.
- 10. Adjust C1804 and C1802 for a peak indication on the Ballantine Meter. Peak reading should be 10 mv minimum.
 - 11. Reduce generator output to zero and remove meter.
 - 12. DELETED
 - 13. DELETED

F. RECEIVER IF ALIGNMENT - Cont'd

- 14. DELETED
- 15. DELETED
- 16. Remove the SIGNAL GENERATOR input connections.
- 17. Reinsert the crystal into the RF module.
- 18. Reinsert 1.5 mc crystal.

G. RECEIVER TESTING - OVERALL

- 1. Set VOLUME control on front panel to the mid-position.
- 2. Set SQUELCH control maximum clockwise.
- 3. Connect the HP 606A to the ANTENNA jack, J1502, on the rear apron of the STR-2. Set at zero output.
 - 4. Connect the Ballantine VTVM between terminals 3 & 5 on TB1501.
- 5. Set the SIGNAL GENERATOR for an output of 100 m- at the operating frequency noted on the receiver converter frequency nameplate (\pm 50 cps), and modulate 80% at 1 KC.
- 6. Listen to a 1 KC note (e.g. 1KC) on the speaker. Reduce signal generator output until beat note just exceeds noise.

Typed by mtp 12/3/64

G. RECEIVER TESTING - OVERALL - Cont'd

- 7. Adjust VOLUME control for a comfortable listening level and obtain reading on the Ballantine VTVM.
- 8. Adjust receiver converter tuning capacitors A through E, in that order, for peak indication on the Ballantine. Signal generator output should be reduced to maintain signal level just above noise.
- 9. Adjust LSB ADJUST, R1554, for a peak reading, and back off slightly. Set sideband selector to USB and adjust USB ADJUST, R1555, for a peak reading, and back off slightly. Balance USB and LSB as close as possible.

10. Noise Limiter -

- a. Set noise limiter switch to OFF.
- b. Connect scope to terminals 3 & 5 on TB1501.
- c. Adjust scope to obtain suitable sine wave on scope.
- d. Reduce t/cm to 5 seconds/cm.
- e. Observe amplitude of signal in cm.
- f. Hit the base of Q1803 sharply several times in rapid order with a screwdriver. At the same time, observe amplitude of signal increase considerably.
- g. Set noise limiter switch to ON, and be sure that amplitude of signal does not decrease to a smaller value than the amplitude obtained in Step "e".
- h. Hit the base of Q1803 sharply several times with a screwdriver. At the same time, observe that the amplitude of the signal <u>increases</u> only slightly. Disconnect the scope and remove short across CR1805.

11. Signal + Noise-to-Noise Ratio -

a. Set the signal generator for an output of 3 μv at the operating frequency ± 50 cps noted on the receiver converter frequency nameplate, and modulate 30% at 1 KC.

TN	NO. s-874				
REV: OABC	AC SPECIFICAT				
COMPILED: RDV	CHECKED:	APPD:	SHEET 8 OF 10		
TITLE: TEST PROCEDUR	E FOR STR-2B &2C				

G. RECEIVER TESTING - OVERALL - Cont'd

11. Signal + Noise-to-Noise Ratio -

- b. Readjust R1822 to obtain .78V on the Ballantine.
- c. Disconnect the signal generator from the STR-2 and observe the new reading. The difference in DB is the Signal + Noise-to-noise ration, and should be a minimum of 15 DB.
 - d. Set Squelch control to trigger at 3 uv input at antenna.

12. IF Output -

Typed by mtp 12/3/64

a. Connect a47 ohm load resistor across J1535, and measure 2 mv across.

13. Total Harmonic Distortion -

- a. Setting of Distortion Meter Distortion Frequency 200 to 2K.
- b. Range 10 CAL.
- c. Connect the Distortion Meter across the 600 ohm line and calibrate the meter to read $-10~\mathrm{db}$.
- d. Set range to -20 db and adjust frequency and amplitude to obtain a minimum reading.
- e. Repeat Step "d" for the -30 db and -40 db range. The total harmonic distortion should be no more than 6%. Disconnect the Distortion Meter.

14. Dynamic Range -

a. In gradual steps, increase output of Signal Generator from 3u V to .1 volt. The output on the Ballantine should not vary more than 10 DB.

15. Audio Response -

- a. Set the Signal Generator for an output of $3\mu v$ at the operating frequency ± 50 cps noted on the receiver converter name plate. (no modulation)
- b. Connect the scope to the emitter of Q1803 and observe the amplitude of the signal.

COMPILED: RDV	CHECKED:	APPD:	SHEET 9 OF 10			
TITLE: TEST PROCEDURE	E FOR STR-2B & 2C					
Typed by mtp 12/3/	164					

G. RECEIVER TESTING - OVERALL - Cont'd

15. Audio Response -

- c. Set the Signal Generator to a lower frequency until the amplitude of the signal is approximately 1/3 from the amplitude observed in Step "b".
- d. Set the Signal Generator to external a-c modulation and modulate 30% at 1KC.
- e. Read the output on the A-c Ballantine meter and use this reading as a 0 db reference point.
- f. Change audio generator frequency down to 300cps and up to 3KC. The change in audio output as measured on the Ballantine should not be more than ±4 db.
